

# MANIKONDA THARUN

## GTM Engineer

California, USA | (205)259-8634 | tharun.manikonda1@outlook.com

### SUMMARY

GTM Engineer specializing in building AI-powered sales systems using LLMs, data pipelines, and automation workflows. Experienced in connecting product data, CRM platforms, and sales engagement tools to drive real-time actions, improve conversion rates, and eliminate manual workflows. Proven ability to design scalable GTM infrastructure that directly impacts pipeline growth and revenue outcomes.

### TECHNICAL SKILLS

**Languages:** JavaScript, Java, Python, JavaScript, SQL  
**AI & LLMs:** OpenAI API, Claude, LangChain, Prompt Engineering, RAG Systems, Structured Output Generation  
**GTM Systems:** Salesforce, HubSpot, Lead Routing, Lead Scoring, CRM Automation, Lifecycle Management  
**Data Platforms:** Snowflake, BigQuery, Fivetran, Data Modeling, Event Pipelines  
**Sales Tech:** Outreach, Salesloft, Gong, ZoomInfo, Clearbit  
**Automation:** APIs, Webhooks, n8n, Zapier, Workflow Orchestration, Async Processing  
**RevOps:** Funnel Optimization, Pipeline Analytics, Conversion Tracking, Territory Logic  
**Internal Tools:** Slack Bots, Internal Dashboards, Micro-Apps, Sales Enablement Tools  
**Architecture:** Event-Driven Systems, Idempotent Processing, Schema Evolution, Rate-Limit Handling  
**Observability:** Data Quality SLAs, Logging, Pipeline Monitoring, Failure Handling  
**Core Engineering:** System Design, Debugging, Scalable Systems, Integration Design

### PROFESSIONAL EXPERIENCE

#### McKinsey & Company | CA, USA

##### GTM Engineer

May 2025 – Present

- Designed and deployed LLM-powered workflows using OpenAI and LangChain to automate lead enrichment and personalization, driving a 30% increase in pipeline conversion across enterprise sales teams.
- Built pipelines integrating Snowflake product signals with Salesforce and HubSpot, enabling real-time lead scoring and routing, driving a 28% increase in conversion through timely engagement.
- Integrated Outreach and Salesloft with CRM workflows to automate sequencing and follow-ups, reducing manual outreach effort by 50% and improving sales team productivity across outbound campaigns.
- Developed AI-powered battlecards using Gong conversation data and competitor signals, enabling real-time sales coaching and improving win rates by 20% in competitive deal scenarios.
- Leveraged ZoomInfo and Clearbit APIs for enrichment pipelines, improving lead quality and targeting accuracy by 30% through automated firmographic and intent-based segmentation.
- Built Slack bots and internal tools exposing customer health scores and upsell signals, improving rep response time and increasing upsell conversion rates by 25% across accounts.
- Partnered with sales and data teams to optimize lifecycle workflows and funnel stages, improving pipeline velocity by 30% through data-driven automation and experimentation.

#### Uber | CA, USA

##### Software Engineer (Data & Distributed Systems)

February 2024 – May 2025

- Developed event-driven data pipelines processing over 1M daily records using distributed architectures, improving data availability and enabling real-time analytics across high-volume production systems.
- Built API-driven services integrating multiple systems, improving data flow efficiency by 25% and reducing latency across distributed backend environments supporting large-scale operations.
- Designed SQL-based workflows for analytics and reporting, improving data accuracy by 25% and enabling faster insights across product and operations teams.
- Implemented logging and monitoring systems to track pipeline performance and failures, reducing data inconsistencies by 20% and improving reliability across distributed environments.
- Collaborated with cross-functional teams to deliver scalable automation systems, improving operational efficiency and enabling seamless communication across engineering and business workflows.
- Optimized system performance through debugging and architectural improvements, ensuring reliability and scalability across backend systems supporting millions of users globally.

#### KPMG | India

##### Software Engineer (Data Systems & Analytics)

September 2021 – July 2022

- Built data pipelines and reporting systems using SQL and structured models, improving data consistency by 25% and enabling reliable integration across enterprise business and financial workflows.
- Developed dashboards and analytics tools for stakeholders, improving visibility into key performance metrics and enabling data-driven decision-making across multiple business teams.

- Debugged and resolved data inconsistencies through validation and analysis, reducing errors by 20% and improving reliability across data pipelines and reporting systems.
- Collaborated with stakeholders to translate requirements into scalable technical solutions, improving system usability and alignment with operational and reporting goals.

**Trigent Software | India**

*Frontend Developer*

*March 2020 – August 2021*

- Developed React-based frontend applications integrated with backend APIs, improving user engagement by 20% and enabling seamless interaction across web-based platforms.
- Implemented API integrations connecting frontend interfaces with backend services, ensuring reliable data flow across distributed application components and improving system functionality.
- Debugged UI and integration issues using browser tools and logs, reducing defects by 25% and improving application stability across production releases.

**PROJECTS**

---

**Enterprise AI Document Assistant (RAG System)**

- Architected a Retrieval-Augmented Generation (RAG) system using Python and LangChain to automate information extraction across 5,000+ enterprise documents, achieving 92% retrieval precision.
- Implemented a vector search pipeline using Pinecone with tuned chunking strategies (512-token segments with overlap), delivering semantic search responses in under 500ms.
- Leveraged GitHub Copilot and Cursor to develop FastAPI endpoints and React.js dashboards, reducing the end-to-end development cycle by 40%.
- Integrated AWS S3 for document storage, enabling semantic search results in under 500ms for complex queries.

**NotchSafe — macOS Productivity Utility**

- Engineered a native macOS utility using Swift and SwiftUI that transforms the MacBook notch into an interactive hub for encrypted storage and clipboard management.
- Integrated AES-256-GCM encryption and Touch ID biometric authentication, ensuring secure file handling with zero external dependencies.
- Designed a persistent clipboard monitoring system using NSEvent, resulting in a lightweight footprint (<5MB binary) and minimal system memory usage.

**SmartHealth iOS: AI-Driven Wellness Tracker**

- Developed a native iOS application using Swift and CoreML to provide real-time wellness insights based on user activity and behavioral data.
- Integrated a local NLP model for automated journaling and sentiment analysis of daily health logs.

**EDUCATION**

---

**Master's in Computer Science**

University of Alabama at Birmingham

*August 2022 – December 2023*

**Bachelor of Engineering in Computer Science**

K.S. Institute of Technology, Karnataka, India

*June 2018 – May 2022*

**CERTIFICATIONS**

---

- AWS Certified Solutions Architect – Associate
- Certified MERN Developer – Namaste Dev
- Node.js Certified Developer – Coursera
